Essential Cell Biology provides a readily accessible introduction to the central concepts of cell biology, and its lively, clear writing and exceptional illustrations make it the ideal textbook for a first course in both cell and molecular biology. The text and figures are easy-to-follow, accurate, clear, and engaging for the introductory student. Molecular detail has been kept to a minimum in order to provide the reader with a cohesive conceptual framework for the basic science that underlies our current understanding of all of biology, including the biomedical sciences. The Fourth Edition has been thoroughly revised, and covers the latest developments in this fast-moving field, yet retains the academic level and length of the previous edition. The book is accompanied by a rich package of online student and instructor resources, including over 130 narrated movies, an expanded and updated Question Bank. Essential Cell Biology, Fourth Edition is additionally supported by the Garland Science Learning System. This homework platform is designed to evaluate and improve student performance and allows instructors to select assignments on specific topics and review the performance of the entire class, as well as individual students, via the instructor dashboard. the authors. The course began in 1997 but a new syllabus has recently been put in place. The focus is on thoracic, abdominal and vascular injuries, caused by both penetrating trauma, such as a knife, and ballistic trauma caused by guns. This Manual accompanies the course and its aim is to “ demystify the body ” and show how to control massive blood loss. Interventions, whether they be military or civilian, are described in full, and techniques derived from the battlefield and world-wide hotspots in trauma —are exemplified within this book.

Operative Orthopaedics is a definitive and comprehensive guide to elective orthopaedic surgery for trainees preparing for FRCS and surgeons at MRCS level. With the emphasis on techniques employed and the reasoning behind them, this book is both a practical instruction manual and a revision tool. Based on the authoritative 'Stanmore course' run by the Royal National Orthopaedic Hospital Operative Orthopaedics covers all aspects of elective orthopaedic surgery as assessed by the FRCS Higher Specialty exams. Surgery of the upper limb, lower limb and spine is explained from preoperative planning through technique and potential complications. Specialist areas such as tumour surgery, paediatric surgery and limb reconstruction are also included. Each chapter concludes with key references and sample viva voce questions and answers to extend and reinforce learning.
