answer the question of death by black hole, they'll be much closer to merging the two pillars into a single theory of quantum...

How It Works: Death By Black Hole | Popular Science

Although black holes may seem like a special occurrence, they're actually in the middle of every known galaxy, even ours. The largest black hole we know of is 40 billion times the mass of our Sun. Black holes do eventually die due to a phenomenon known as hawking radiation, which is basically a build-up of quantum effects near the event horizon. But this takes a very long time, and everything else in the Universe is predicted to have completely disappeared before the last black hole dies.

Watch: The Life And Death of Black Holes Explained

This book is a selection of small essays that he's written for various newspapers, magazines, and internet blogs. Death by Black Hole touches on a lot of amazing scientific concepts that are almost taken by granted by a lot of people today, but it provides a foundation for everything that we do in space or dealing with the cosmos.
