We write dx instead of " Δx heads towards 0".. And "the derivative of" is commonly written $\therefore x^2 = 2x$ "The derivative of x^2 equals $2x$ " or simply "d dx of x^2 equals $2x$ ". What does $x^2 = 2x$ mean?. It means that, for the function x^2 , the slope or "rate of change" at any point is $2x$.. So when $x=2$ the slope is $2x = 4$, as shown here:.. Or when $x=5$ the slope is $2x = 10$, and so on.

~~Introduction to Derivatives~~

Morphological derivation, in linguistics, is the process of forming a new word from an existing word, often by adding a prefix or suffix, such as un- or -ness. For example, unhappy and happiness derive from the root word happy. It is differentiated from inflection, which is the modification of a word to form different grammatical categories without changing its core meaning: determines, determining, and determined are from the root determine.
