A sumptuous feast for the eyes, and rich in historic detail, *The Stocking Book* is a lively and lovely paean to the world's most alluring garment. Often overlooked, the stocking has always been as outrageous as it is practical, from the ancient world all the way up to modern era. Arwas navigates the creation of the stocking, from the first knitters to mass manufacturing and the invention of nylon, and explores its many uses, from a practical garment worn by both sexes to the extravagant, luxury items they have become today. Sifting through decades of art, Arwas delves into the explosive cultural sensation of the stocking, from the role they have played on the runway to the phenomenon of the Christmas stocking. Complete with full-color illustrations and photos, as well as cultural commentary, *The Stocking Book* is bursting at the seams with its delightful and irreverent history.

Object-Oriented Programming With Java Was Developed For Students In The Science, Engineering, And Business Fields Where Knowledge Of Programming Is Thought To Be Essential. This Text, On Modern Software Development, Contains Material That Is Typically Covered In A CS1 Course. In Addition To Traditional Introductory Programming Concepts, Object-Oriented Concepts And Techniques Such As Inheritance And Polymorphism Are Presented In A Student-Friendly Manner. Java-Related Topics Such As Exception Handling And The Java I/O Models Are Carefully Treated, And An Entire Chapter Is Devoted To Java Applets.

The continual evolution of object oriented technologies creates both opportunities and challenges. However, despite the growing popularity of object oriented technology, there are numerous issues that have contributed to its inability to firmly entrench itself and take over for the older, proven technologies. Object oriented technology's image problem has created a highly difficult decision making process for corporations considering widespread adoption of these technologies. Object Oriented Technologies: Opportunities and Challenges addresses concerns, opportunities and technology trends in the application of object oriented technologies. The chapters of this book were selected to represent a variety of perspectives concerning the present and future of this broad sub-field of software development.

'A playwright of world stature'—Mario Relich, Wasafiri Tara and Chandan have always been close. They were, after all, born as conjoined twins. But a horrific revelation drives a wedge between the siblings, plunging Chandan into a cycle of guilt and blame from which he cannot escape. One of Mahesh Dattani's most popular works, Tara was also one of the first Indian plays in English to highlight the dangers of gender discrimination, and the insidious ways in which it operates in our society. 'At last we have a playwright who gives sixty million English-speaking Indians an identity'—Alyque Padamsee 'Powerful and disturbing'—The New York Times

First Responders face a difficult task in retirement: replacing the strong sense of identity, the camaraderie, and the challenge that comes from a life of service. Thankfully about half of American retirees describe their post-work years as the best time of their life. Winning at Retirement is a step-by-step guide to ending up in that happy half. It offers a practical, inspirational, and entertaining look at the process of seeking happiness in what should be your best years. This special edition of the popular retirement guide adds information and emphasis to areas specific to the role of "First Responder". Winning provides plain language advice on matters like Social Security, Medicare, and investing. The First Responder Edition includes guidance on the "DROP" pension option, and talks about ways that civil service benefit packages interact with Social Security and Medicare. But the book also emphasizes the importance of seeking a meaningful, impactful identity beyond the career years, and describes how to do so. Today's retirees are plugged-in. Winning takes a thoroughly modern look at the subject, describing web tools, apps, TED talks, and the vast world of resources that are at your fingertips in your quest for financial stability, health, and purpose. In the end you will learn about the "Retirement Happiness Map", a simple but effective note-taking method that pulls together all aspects of your plan for a happy future.

This book provides insights into research in the field of artificial intelligence in combination with robotics technologies. The integration of artificial intelligence and robotic technologies is a highly topical area for researchers and developers from academia and industry around the globe, and it is likely that artificial intelligence will become the main approach for the next generation of robotics research. The tremendous number of artificial intelligence algorithms and big data solutions has significantly extended the range of potential applications for robotic technologies, and has also brought new challenges for the artificial intelligence community. Sharing recent advances in the field, the book features papers by young researchers presented at the 4th International Symposium on Artificial Intelligence and Robotics 2019 (ISAIR2019), held in Daegu, Korea, on August 20–24, 2019.

"An accessible introduction to the C++ language and object-oriented design for students and programmers who know at least one modern high-level language. Understanding that the greatest challenge in learning C++ is being able to think in terms of classes and objects, Kip Irvine introduces these topics immediately as concepts in the context of real-world applications such as e-mail systems and automated bank tellers." "Through extensive use of short program examples and case studies, the author provides a concise, clear discussion of C++ syntax. He includes extensive coverage of the object model concept and how to use an object-oriented approach to design. Throughout the book, the importance of careful analysis and design of programs is evidenced."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

In a "brutally honest" memoir, a motivational speaker, military veteran, and cancer survivor reveals how hope can bring about positive change (Ernie Johnson, Jr., sportscaster TNT/TBS). Change: If I Can, You Can is the story of a man destined for as much turmoil as life can provide. Travis Angry created his identity through childhood rebellion, dropping out of school, being in the military, fighting cancer, marrying, divorcing, raising children as a single father, obtaining a college degree, writing a memoir, and working as a professional speaker. Angry's gift is showing others how to resolve fear. His mission is to help teenagers, parents, teachers, coaches, and youth group directors to understand their lives and use hope as a tool for positive change. "Travis' story will make you want to scream and shout. His perseverance and strength is truly inspiring! He is making a positive impact within his family and community. He is truly making a difference one page at a time." —Jordin Sparks, singer/actress

This is an excellent, up-to-date and easy-to-use text on data structures and algorithms that is intended for undergraduates in computer science and information science. The thirteen chapters, written by an international group of experienced teachers, cover the fundamental concepts of algorithms and most of the important data structures as well as the concept of interface design. The book contains many examples and diagrams. Whenever appropriate, program codes are included to facilitate learning. This book is supported by an international group of authors who are experts on data structures and algorithms, through its website at <http://www.cs.pitt.edu/jung/GrowingBook/>, so that both teachers and students can benefit from their expertise

Advanced Java Programming is a textbook specially designed for undergraduate and postgraduate students of Computer Science, Information Technology, and Computer Applications (BE/BTech/BCA/ME/M.Tech/MCA). Divided into three parts, the book provides an exhaustive coverage of topics taught in advanced Java and other related subjects.
