This printout will help you learn about the human skeleton and identify some of the important features of our skeletal anatomy. This document contains an outline of a juvenile human standing 109 cm tall (or 43" tall). Modern humans average a height of 109 cm between 5 and 6 years of age. To compare, the average height for a modern human adult female is 162 centimeters (or 5'3") tall.

If you were a child you could call them "life-size" anatomy posters! They are actually around two thirds life size. The print size of the human skeleton chart and the human muscle anatomy chart is 51 inches by 34 inches = 1300mm x 860mm. That means these posters are about EIGHTEEN times bigger than a sheet US letter or A4 paper!

The printable life-size skeleton gives the students an opportunity to build a model of how their own bodies look inside. They can handle the printed bones, move them around and even try them on! The printable bones are scaled so that their size would be right for an average eight-year-old child, but should also fit reasonably well children who are two years younger or older.
