Ingredients, self-preserving or preservative-free cosmetics Synopsis Preservatives are added to products for two reasons: first, to prevent microbial spoilage and therefore to prolong the shelf life of the product; second, to protect the consumer from a potential infection. Although chemical preservatives prevent

Self-preserving cosmetics - Wiley Online Library

Although chemical preservatives prevent microbial growth, their safety is questioned by a growing segment of consumers. Therefore, there is a considerable interest in the development of...

(PDF) Self-preserving cosmetics - ResearchGate

The preservative efficacy profile was similar to control formula containing preservatives. CONCLUSION: Self-preserving personal care/cosmetic products can be developed which are as efficacious as preserved products by a prudent selection of multifunctional actives, antioxidants and chelators as a part of the formulation.

Self-preserving personal care products.

The term self-preserving is more appropriate than preservative-free for most aqueous products containing a chemical system that kills microorganisms and/or prevents their growth. In other words, nearly all of the time water-based 'preservative-free' products contain a preservative - just not one recognised by the EU.

Optiphen is the oil-soluble alternative to Germaben. Due to its patented combination of ingredients, it provides broad-spectrum preservation for cosmetics as well as providing an excellent finish for your products. It is a great preservative for oil-based products, and for anyone who isn't bothered by synthetic preservation.

Synthetic & Natural Preservative For Cosmetics & Lotions

Preservatives play a very important function in products containing water: they kill microorganisms and water-borne bacteria, and prevent the growth of bacteria, mold and yeast. If a product contains water (including hydrosols, floral water and aloe vera juice, all of which contain water), a preservative is essential to help prevent microbes ...
