Genre studies and genre approaches to literacy instruction continue to develop in many regions and from a widening variety of approaches. Genre has provided a key to understanding the varying literacy cultures of regions, disciplines, professions, and educational settings. GENRE IN A CHANGING WORLD provides a wide-ranging sampler of the remarkable variety of current work. The

twenty-four chapters in this volume, reflecting the work of scholars in Europe, Australasia, and North and South America, were selected from the over 400 presentations at SIGET IV (the Fourth International Symposium on Genre Studies) held on the campus of UNISUL in Tubarão, Santa Catarina, Brazil in August 2007—the largest gathering on genre to that date. The chapters also represent a wide variety of approaches, including rhetoric, Systemic Functional Linguistics, media and critical cultural studies, sociology, phenomenology, enunciation theory, the Geneva school of educational sequences, cognitive psychology, relevance theory, sociocultural psychology, activity theory, Gestalt psychology, and schema theory. Sections are devoted to theoretical issues, studies of genres in the professions, studies of genre and media, teaching and learning genre, and writing across the curriculum. The broad selection of material in this volume displays the full range of contemporary genre studies and sets the ground for a next generation of work.

More schools are choosing to teach single subject science to their lower secondary students, and in particular their most able students. This First series has been developed especially to meet that need. Chemistry First covers all the chemical processes that you need for Key Stage 3 of the National Curriculum, with some overlap

with physics, and shows the effect of chemistry on our everyday lives. Key Points: Complete coverage of Key Stage 3 Programmes of Study and Common Entrance requirements Solid foundation for GCSE with material up to Level 8 Topics presented over two or four pages in an information-based, no-nonsense approach Questions and activities to check understanding of the main ideas and to prepare for exams Material that will stimulate, challenge and motivate your brightest and most able students Questions on every page provide you with ready-made material for extension

This volume examines the phenomenon of fake news by bringing together leading experts from different fields within psychology and related areas, and explores what has become a prominent feature of public discourse since the first Brexit referendum and the 2016 US election campaign. Dealing with misinformation is important in many areas of daily life, including politics, the marketplace, health communication, journalism, education, and science. In a general climate where facts and misinformation blur, and are intentionally blurred, this book asks what determines whether people accept and share (mis)information, and what can be done to counter misinformation? All three of these

aspects need to be understood in the context of online social networks, which have fundamentally changed the way information is produced, consumed, and transmitted. The contributions within this volume summarize the most up-to-date empirical findings, theories, and applications and discuss cutting-edge ideas and future directions of interventions to counter fake news. Also providing guidance on how to handle misinformation in an age of "alternative facts", this is a fascinating and vital reading for students and academics in psychology, communication, and political science and for professionals including policy makers and journalists.

Local newspapers can hold back the rising tide of political division in America by turning away from the partisan battles in Washington and focusing their opinion page on local issues. When a local newspaper in California dropped national politics from its opinion page, the resulting space filled with local writers and issues. We use a pre-registered analysis plan to show that after this quasi-experiment, politically engaged people did not feel as far apart from members of the opposing party, compared to those in a similar community whose newspaper did not change. While it may not cure all of the imbalances and inequities in opinion journalism, an opinion page that ignores national politics could help local newspapers

push back against political polarization.

This book makes a case for a multidisciplinary and transdisciplinary approach to energy research—one that brings more of the social sciences to bear. Featuring eight studies from across the spectrum of the social sciences, each applying multiple disciplines to one or more energy-related problems, the book demonstrates the strong analytical and policy-making potential of such a broadened perspective. Case studies include: energy transitions of households in developing countries, the 'curse of oil', politics and visions for renewables, economics and ethics in emissions trading, and carbon capture and storage.

The 'third wave' of variation study, spearheaded by the sociolinguist Penelope Eckert, places its focus on social meaning, or the inferences that can be drawn about speakers based on how they talk. While social meaning has always been a concern of modern sociolinguistics, its aims and assumptions have not been explicitly spelled out until now. This pioneering book provides a comprehensive overview of the central tenets of variation study, examining several components of dialects, and considering language use in a wide variety of cultural and linguistic contexts. Each chapter, written by a leader in the field, posits a

unique theoretical claim about social meaning and presents new empirical data to shed light on the topic at hand. The volume makes a case for why attending to social meaning is vital to the study of variation while also providing a foundation from which variationists can productively engage with social meaning.

Much of the science of public opinion focuses on individuals, asking if they perceive or misperceive and why. Often this science will emphasize misperceptions and the psychological processes that produce them. But political debates have outcomes in the aggregate. This Element turns to a more systematic approach, emphasizing whole electorates and examining facts through a dynamic lens. It argues public opinion will converge toward truth over time and frequently finds correct views of facts grow stronger under information flow, while misperception recedes.
